

Achieve the highest possible auto-adjudication rate.
Authoritative validation at claim intake

Automatically validate and correct key issues with provider data on submitted claims. Right now.

Without an authoritative validation step during the claim intake process, it's hard to determine if the provider information submitted on a claim is accurate, current and valid. Until now. With LexisNexis® ClaimCleanse™, you can validate, fix and alert payers that research is needed about the provider (rendering, billing or referring) as each claim is submitted.

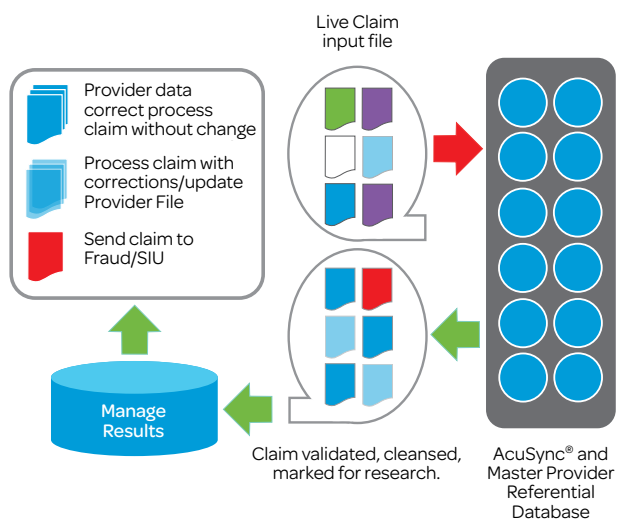

Why is accurate and up-to-date provider data so important to productive claims processing? Without it, inconsistencies between provider data in the claim submission and the provider file can wreak havoc on productive claims, resulting in:

- Increased manual work effort and cost
- Incorrect selection (missed or mismatched results)
- Increased potential of incorrect payment
- Incorrect member liability

- Risks to performance guarantees and late payment interest
- Potential fraudulent submissions not identified
- Inaccuracies in data warehouse reporting and analysis

Instantly solve the provider data accuracy issue on inbound claims and improve the match rate to your provider file.

ClaimCleanse is our hosted provider data validation and correction service for in-stream claim processing. It reduces inconsistencies between provider data in the claim submission and the data in the provider file, optimizing the claims match. With ClaimCleanse, you can easily validate and correct the provider data attributes on your inbound claims in the early stage of the adjudication process.

Operating in either real-time or batch processing mode, ClaimCleanse works in sync with the pace of your claims processing cycle, automatically correcting key fields on claim files to ensure the highest possible auto-adjudication rates. In addition, ClaimCleanse lets you quickly identify discrepancies between rendering and billing on both the file and claim, automatically:

- Standardizing address and name
- Adding missing information on NPI, name and address
- Validating correct data elements
- Providing corrected billing information based on business rules
- Delivering specific condition codes about each provider data field on the claim

At the heart of ClaimCleanse is our Master Provider Referential Database (MPRD™), containing accurate and up-to-date information on 6.5 million health care providers. This works in tandem with our proprietary AcuSync®, algorithms that automatically correct errors as well as missing fields.

Finally, you can be sure that the provider is active and in good standing at the location where their services are rendered, and that their address and TIN are correct and current.

ClaimCleanse also features our customizable business rules, allowing you to set specific preferences at the claim field level.

How it works.

ClaimCleanse improves your auto-adjudication rate by:

- Matching claims to the MPRD
- Identifying data discrepancies between the claim, MPRD and/or provider file
 - Leveraging all active practice and billing addresses
 - Linking individuals to group practices
- Correcting/repairing key fields on each claim to improve the match rate
- Identifying potentially fraudulent/sanctioned provider submissions on a claim-by-claim basis
- Assigning the Persistent Provider Identifier on every claim for easy tracking

Realize improvements in claims and provider file accuracy.

Having an authoritative validation step in the claim intake process ensures the provider information on each claim submission is correct and current, and that the provider is in good standing. With ClaimCleanse, you'll benefit from many significant operational and financial improvements, including:

- Improved financial and provider file accuracy
- Lower administrative costs
- Reduced claims fallout and manual effort
- Better identification/correction of provider file and claim discrepancies
- Enhanced auto-adjudication and more accurate matches to the internal provider file
- Greater address accuracy for delivery purposes
- Updated internal provider files to stay in sync with inbound claim data
